A Different Kind of Dental Practice

Sydney Paediatric Dentistry (SYDPD) is a specialist paediatric dental practice that offers specialist paediatric dental and specialist orthodontic services. We are an age specific dental practice who treats infants, children, adolescent patients and children with special needs. SYDPD's environment has been carefully designed and created to introduce your children to dentistry in a relaxed and comfortable way.

Paediatric Dentistry is a specialist field; when your child needs special medical attention you are referred to a paediatrician and the same is true with dentistry. Our professionals do not rely on adopting techniques used to treat adults as we have specifically designed treatment, consultation and sedation rooms that will ensure calm and stress-free procedures.

MEMBER OF

Your Child's Welfare is Our Priority

A specially trained team of specialist paediatric dentists, specialist orthodontists, oral health therapists, anaesthetists, registered medical nurses (RNs), clinical dental assistants and front office staff will ensure that you and your child have a positive experience visit to our practice.

Paediatric dentistry is what we practice but your child's welfare is our top priority. Our experience working with children means that we may be able to identify other areas of your child's health that require attention and organise referrals to medical and allied health specialists to address the needs of your child. At SYDPD we have a multi-disciplinary approach to dental care by providing in-house referrals to Orthodontists, combined general anesthesia lists with Oral & Maxillo-Facial Surgeons (OMFS) and Ear, Nose and Throat (ENT) specialists. SYDPD is your best choice to cover most of your children dental needs under the same roof.

What to Expect on Your First Visit

On your first visit to us, we will rarely carry out treatment unless is absolutely necessary. Every child is different! Your child may have come to us with a complex dental problem or possibly, with some negative experiences. With this in mind, this consultation will provide parents and patients with information about their dental assessment plus a thorough assessment of your child's individual needs. Any questions you have can be raised at this first visit and our team will gladly provide any information you need. You may also visit our website at www.sydneypaediatricdentistry.com

Our cutting edge and state of the art dental equipment utilises the latest technology available and is designed for children and around the special needs of younger patients including the use of digital scanning for orthodontic appliances, digital radiography, movie goggles for treatment and non-invasive diagnostic equipment.
